

480T 580T 780T

Cab/Operator's Compartment

Kramer sets new standards with the spacious cabs offering all-around windows with total visibility. The ergonomic control elements of the Kramer telescopic loaders reduce the work load and increase productivity.

All functions are easy to operate and right where you expect to find them... the ideal work environment adapted to your personal requirements. With the multifunctional joystick, loading material and selecting the driving direction is all done with

one hand. The left hand always stays on the steering wheel for fast and safe work cycles. The cab can be accessed through the doors on either side at any time and offers an optimal position giving the driver excellent visibility both of the machine and the loader unit.

Maintenance, Service and Engine

The 480T, 580T and 780T telescopic loaders are maintenance and service-friendly: all maintenance and service points are fully accessible with no need to kneel or lie down whatsoever.

All components are supplied by renowned manufacturers and have been repeatedly tested for reliability. Kramer wheel loaders are proven machines with long maintenance intervals and short downtimes to ensure maximum profitability.

Powerful Hydrostatic Drive

The innovational *ecospeed* high speed gearbox gives you decisive advantages: over its entire speed range, the loader runs in the optimal characteristic line of the fuel-efficient diesel engine, considerably reducing both fuel consumption and noise emissions.

What's more, the driver can make full use of the wheel loader's tractive power over the entire speed range. Power without compromising!

ecospeed: continuous speed setting from 0–40 kph

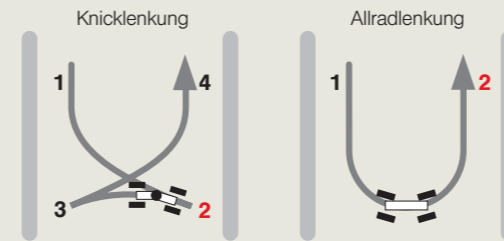

480T 580T 780T

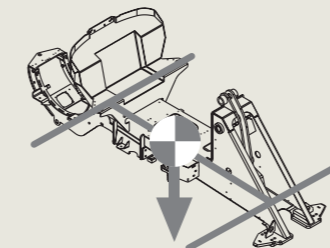

4-Wheel Manoeuvrability

Winners know all about high steering angles and tight turning circles. Not just in Formula 1! Only four wheel steering makes neat U-turns possible in one single movement.

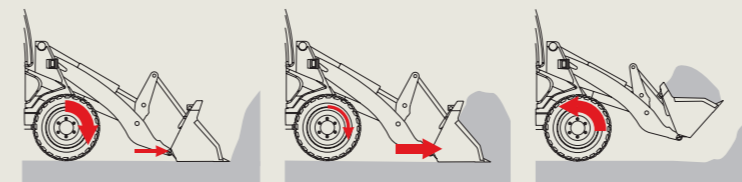

Stability

The rigid one-piece chassis ensures unchanging stability throughout the turning circle – our research gives you unparalleled safety and performance.

Power to Spare

Kramer offers an intelligent combination of speed and pushing power. Once the loader drives into a heap of material, speed is reduced and the pushing power increased. Or vice versa. All completely automatically, with no driver intervention.

Kramer 480T/580T/780T Teleloaders

- 4-Wheel Steer Manoeuvrability
- Power to Spare Inside
- Compact Dimensions
- One-Piece Chassis for Superior Stability

No Limits to Quality: Precision and Power in Abundance

The New Kramer 480T/580T/780T Teleloaders

480T 580T 780T

Telescopic Loader Unit:

Equipped with these telescopic loader units, Kramer teleloaders offer you dump heights rivalling those of much larger vehicles.

The compact design ensures tight steering angles and excellent visibility of the hydraulic quickhitch facility. Kramer's renowned manoeuvrability guarantees maximum productivity even in extremely confined areas.

Business Class Comfort:

Large and spacious cab with an unsurpassed ergonomic layout of the control elements. The driver can adapt his work environment to his individual requirements. With large windows offering excellent all-around visibility of the work site and the wheel loader, the driver has full control at any given time, in any situation and whatever the application.

Optimal Seat Position:

High-precision jobs are easy with telescopic loaders: in these compact and extremely manoeuvrable workhorses, the high seat position directly behind the loader unit gives excellent visibility for tasks requiring a high degree of accuracy.

Work Platform

Together with the Kramer-specific work platform, the impressive reaches and heights of the telescopic loader unit allow you to perform a whole range of servicing work, as shown here with a streetlight!

Winter Duty

Fitted with a snow plough and salt sprayer, winter duty is no problem with telescopic loaders. Kramer's exclusive "Ecospeed" high speed gearbox lets you come to grips with the winter.

One-Hand Controls

The joystick with the integrated third control circuit offers precise one-hand control of all work functions. Leave your hands right where they are: drive forwards or backwards, extend or retract the loader unit, switch the third control circuit on or off, dump in or out, raise or lower... do it all with one single joystick and utmost precision.

Recycling

The robust Kramer machines have proven their worth in the recycling industry. All kinds of trucks can be loaded thanks to the high dump heights.

Working with Pallet Forks

The telescopic loader unit offers enhanced possibilities especially in fork lift applications, such as transporting a sailing boat!

Power and Intelligence Unified

The 780T is Kramer's top-model teleloader, and for good reason: it is not only the most powerful, but also combines high output with compact dimensions in an ideal way.

Power Train:

Get the job done easily and in no time at all with the intelligent hydrostatic drive. The drive and the work hydraulics are continuously and automatically adapted to each other. This makes for fast work cycles and, as everyone knows, time is money!

Innovational High Speed Gearbox with 40 kph Top Speed.

The innovational and infinitely variable Ecospeed high speed gearbox is a milestone in hydrostatic drive design. Who else can offer you full and permanent tractive power over the entire speed range from 0 to 40 kph? Only KramerAllrad!

Heavy Duty Bucket

The heavy duty bucket comes in very handy when working with bulky material. The hydraulic clamp has a firm grip on the material for convenient handling and transport of large volumes.

One-Hand Controls

The joystick with the integrated third control circuit offers precise one-hand control of all work functions. Leave your hands right where they are: drive forwards or backwards, extend or retract the loader unit, switch the third control circuit on or off, dump in or out, raise or lower... do it all with one single joystick and utmost precision.

Loading Work

The telescopic loader unit does not affect the excellent wheel loader capabilities whatsoever! The 580T's telescopic unit combined with the elevated work platform offers maximum lift and safety for working at increased heights.

Off-Road Capability

No different from the normal wheel loaders, Kramer's teleloaders can be driven off-road with no restrictions and ensure full performance even in the most difficult terrain! With track-proven Kramer power and handling!
